£169.99 4.8★

Display Neither of these appliances is about flashy screens in the way a premium oven might be, but the user interface still matters. The Ninja Foodi Dual Zone Digital Air Fryer AF300UK has the edge here because its dual-drawer setup is built around independent controls, making it easier to run two foods at different temperatures and times. That gives it a more capable, more informative user experience when you're juggling chips in one drawer and salmon or chicken in the other. Winner: Product B, because the interface supports more complex cooking.

Performance This is the heart of the comparison. Product A, the Ninja Air Fryer MAX PRO AF180UKCP, has a 6.2L single square drawer, which is excellent for larger items and family portions in one space. The square basket is particularly practical for UK meals like roast potatoes, chicken thighs, sausages, and tray-style veg because it gives you a bit more usable surface area than a round basket. Product B offers 7.6L total capacity split across two drawers, and that dual-zone setup is a real performance advantage for timing different foods to finish together. It also includes Max Crisp, plus Air Fry, Roast, Bake, Reheat, and Dehydrate, so it has the broader cooking toolkit. If you want one big batch, Product A is very strong; if you want two different foods cooked at once, Product B is the better performer overall. Winner: Product B, because dual-zone cooking is a genuine upgrade in day-to-day usefulness.

Build quality and design Both are Ninja products with the brand’s usual solid reputation, non-stick baskets, and dishwasher-safe parts, so you’re getting dependable build quality either way. Product A has the more compact, single-drawer layout, which is easier to live with on a typical UK worktop if space is tight. Its black and copper finish also gives it a slightly more premium look, and the included silicone tongs are a nice bonus for handling food without scratching the basket. Product B is more utilitarian in design: two drawers mean a wider footprint, but also more versatility. If you have a smaller kitchen or want something less fussy, Product A wins on design simplicity; if you value function over footprint, Product B wins. Winner: Product A, because it is more compact and elegant for everyday kitchen use.

Capacity and family cooking Product A has a 6.2L single drawer, while Product B offers 7.6L split across two drawers. On paper, Product B has the bigger total capacity, but the split design changes how that capacity feels in practice. For family meals where everything can go in one basket, Product A’s larger single chamber is easier for big trays of chips, roast veg, or a full batch of chicken pieces. For mixed meals, Product B is better because you can cook protein and sides separately without compromise. If your household often eats the same thing at the same time, Product A is very efficient. If you regularly need flexibility, Product B is better. Winner: Tie, because total capacity favours Product B, but single-basket usability favours Product A.

Price and value for money This is where Product A makes a strong case. At £129.99, it is £44.01 cheaper than Product B at £174.00. Both have the same 4.8/5 rating, but Product A does it with fewer parts, a simpler footprint, and a lower upfront cost. That makes it excellent value for buyers who want a reliable air fryer without paying for extra complexity they may not use. Product B is still good value if you'll genuinely use the two drawers often, but the price premium is noticeable. Winner: Product A, because it delivers top-tier Ninja quality for significantly less money.

Features and cooking flexibility Product A covers Air Fry, Roast, and Bake, which is enough for most UK households that want crisp chips, roast dinners, and quick weekday bakes. Product B goes further with Air Fry, Max Crisp, Roast, Bake, Reheat, and Dehydrate. That extra Max Crisp mode is especially useful for frozen foods and getting a more aggressive finish, while Reheat and Dehydrate add real versatility. If you like experimenting or want one appliance to replace more jobs in the kitchen, Product B is the richer feature set. Winner: Product B, because it offers more cooking modes and more control over meal planning.

Overall user experience Product A feels like the easier appliance to own: one drawer, one batch, less thinking, less footprint, lower cost. It suits busy families, smaller kitchens, and anyone who wants an air fryer that’s simple to use straight out of the box. Product B feels more like a mini meal-management system, especially if you cook separate components or want dinner to come together at the same time. In a real UK kitchen, that dual-drawer flexibility is what makes the AF300UK such a cult favourite. Still, unless you know you’ll use two zones regularly, the simpler single-drawer model is the more satisfying daily buy. Overall summary: Product B is the more capable air fryer, but Product A is the better-value purchase and the smarter recommendation for most people.

Final verdict If you want the most versatile and powerful cooking setup, buy Product B. If you want the best balance of price, simplicity, and family-friendly performance, buy Product A. For most buyers, Product A is the definitive recommendation because it gives you Ninja quality, a practical 6.2L single drawer, and a much lower price. Product B is worth the extra money only if dual-zone cooking is something you know you’ll use constantly.

Winner: a

Product A is the better overall buy because it delivers excellent Ninja performance for £44.01 less. Its 6.2L single square drawer is easier to use for everyday family cooking, takes up less worktop space, and comes with handy extras like silicone tongs. Product B is more versatile, but the extra cost only makes sense if you regularly need two independent drawers. For most UK households, Product A is the sweeter deal.

Buy Product A If...

Buy Product A if you want a simpler air fryer that’s easier to fit on a UK worktop and cheaper to own. It’s ideal if you usually cook one meal at a time, want a larger single basket for roast potatoes or family portions, and don’t need dual-zone flexibility. It’s also the better pick if you’re value-conscious and want top-rated Ninja quality without paying extra for features you may rarely use.

Buy Product B If...

Buy Product B if you often cook two different foods at once and want them ready together. It’s the better choice for mixed meals, fussy family schedules, or anyone who will use Max Crisp, Reheat, or Dehydrate regularly. If you’re happy to pay more for greater versatility and a two-drawer setup, this is the more capable machine.
